Mountain Monorail

Mountain sightseeing mountain bike is a new generation of railRoad climbing tour car products, suitable forAll kinds of mountainous and gentle terrain are guaranteedTourist transport volume at the same time, the cost compared to the passThe standard cable car is greatly reduced, and the elevated type is set upThe meter can cross roads, streams and cliffsSuch obstacles, convenient for tourists on the wayEnjoy the scenery along the way.

Mountain Monorail

Slide/Float

The scenic slide is a long-distance slide made mainly of specially made granite. It is divided into various styles such as granite slide, pipeline slide, steel groove slide, water slide, glass slide, and outdoor or non outdoor slide.

In recent years, almost all major scenic spots across the country have built slide projects. It is not only an entertainment transportation tool, but also a beautiful and eye-catching scenery in scenic spots. It is a fashionable, stimulating, and environmentally friendly outdoor sport. With the increasing popularity of tourists, slides have become an emerging industry with unlimited development potential, attracting the attention of many businesses.

The company has been committed to slide construction and construction for 16 years, transforming from a non professional construction team to a professional and qualified professional construction management and operation team. We have rich experience in the construction of various slides, and we have professional talents throughout the entire stage of slide construction, planning, and operation in scenic areas.

Glass Water Slide

In recent years, the tourism demand in China, especially in economically developed regions, has accelerated from sightseeing to leisure vacation. Drifting tourism relies on the development of mountainous rivers surrounding traditional tourist attractions such as famous mountains and rivers, which is an effective enrichment and attraction for the transformation from single sightseeing tourism to comprehensive tourism areas.

On the one hand, tourism is becoming increasingly routine, and on the other hand, tourism is a typical experiential economy, especially with the obvious demand characteristics of urban populations. The participatory, stimulating, and close to nature characteristics of rafting perfectly meet the needs of the market.

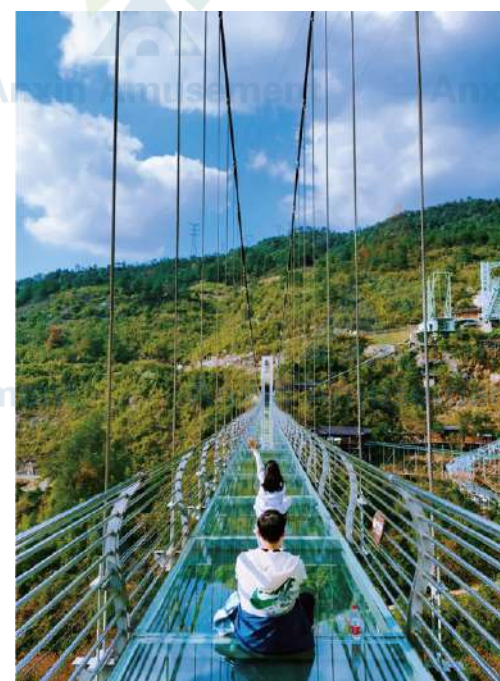

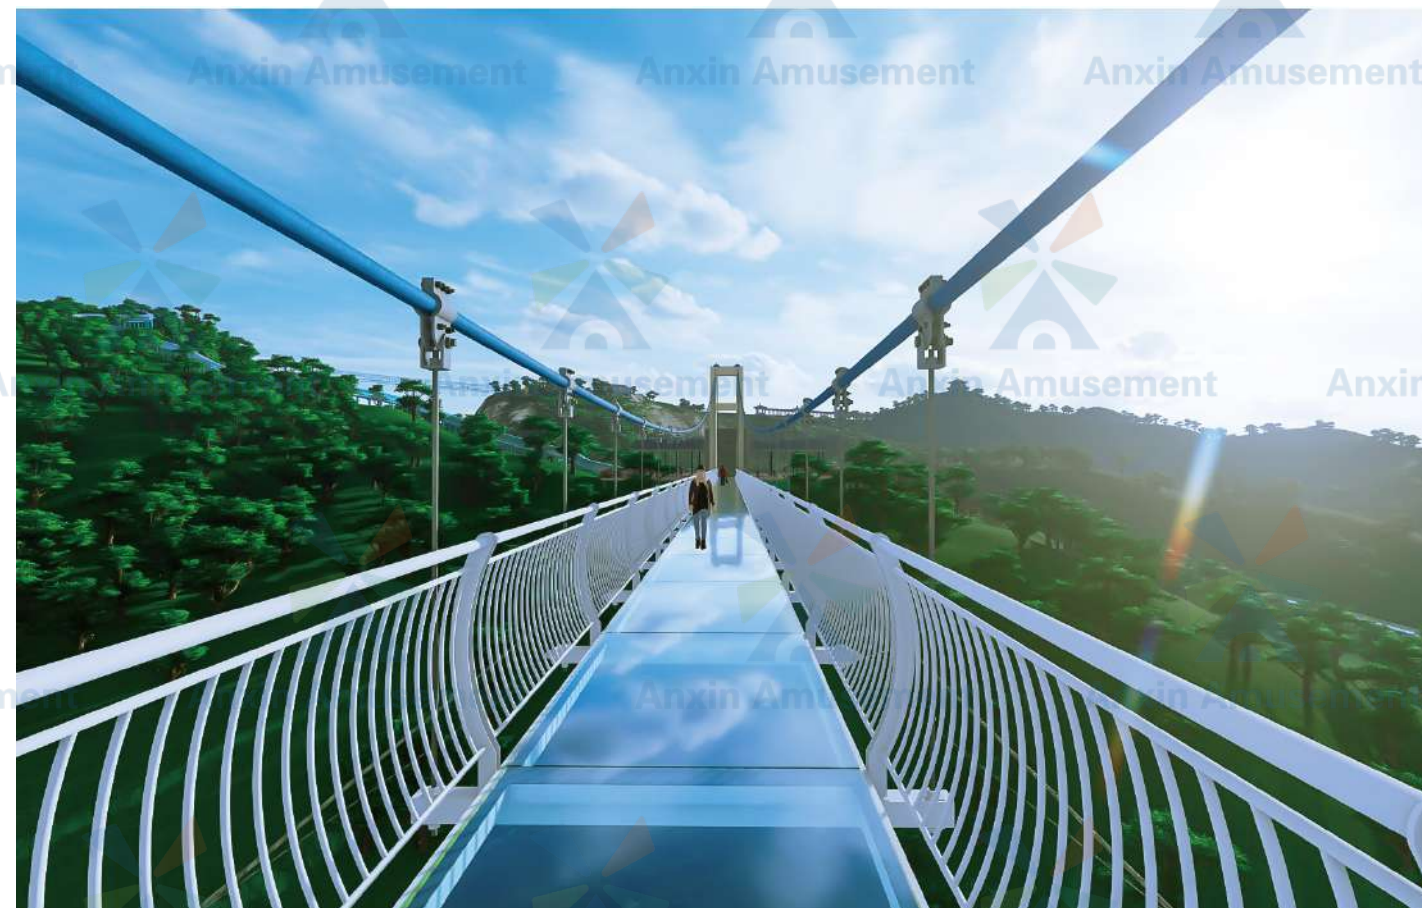

A drifting project typically requires an investment of millions to tens of millions, receiving hundreds of thousands of tourists annually, with prices generally above 100 yuan and an annual profit margin of over 20%. The investment payback period for early projects is only 3-5 years, or even 2-3 years. Drifting itself is difficult to become a destination, and leisure vacations increasingly prefer a one-stop rich experience. The presence of excellent tourist attractions and leisure vacation facilities in the surrounding area is a key factor affecting the sustainable development of drifting scenic spots. If there are unique natural landscapes on both sides of the drifting river, it will inevitably increase the attractiveness of the drifting itself, which is like being in a unique geological and geomorphic area.

Observation Tower Complex/Glass Suspension Bridge

In recent years, there has been an increasing number of emerging tourism products, such as high-altitude suspension bridges and glass suspension bridges, which have gradually been recognized by tourists. In 2013, the company established a specialized department to attract professional talents and established a team for the design, planning, and construction of high-altitude suspension bridges. We mainly provide services such as the design and construction of suspension bridges, high-altitude suspension bridges, glass suspension bridges, high-altitude cable bridges, and glass sightseeing platforms in tourist attractions, as well as the installation, maintenance, sales, and after-sales of required products. With professional qualifications, strong technical strength, and thoughtful after-sales service, we have built multiple high-altitude suspension bridges, sightseeing platforms, and other products over the years. They have been installed in scenic spots, vacation areas, amusement parks, and other places and have been highly praised. They have passed the acceptance inspection of relevant national departments and operate normally.

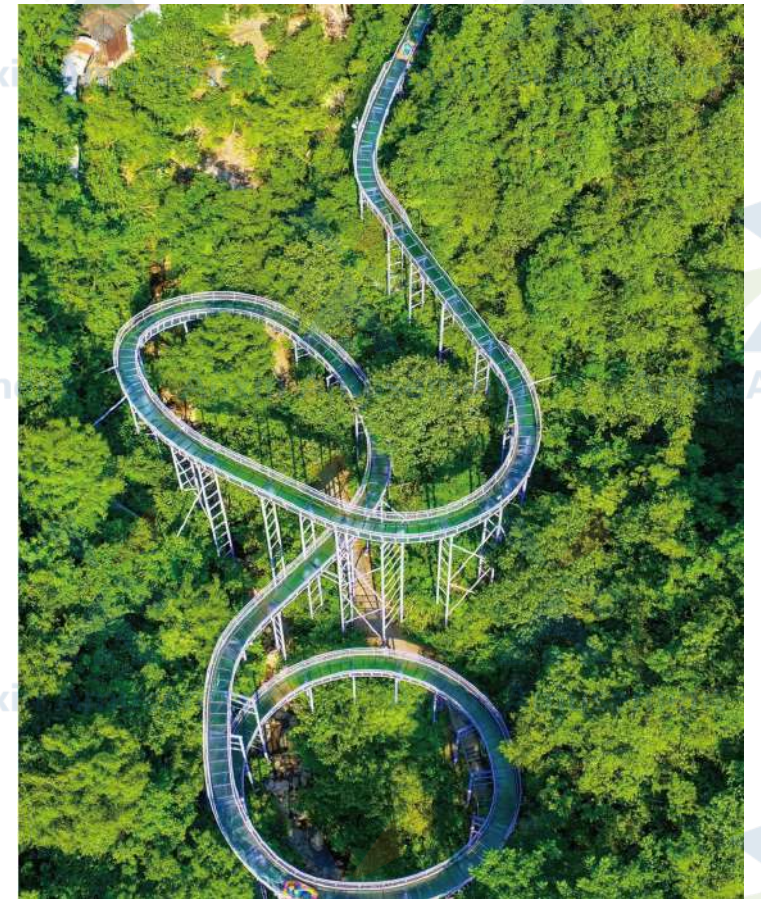

High altitude suspension bridges and other projects require high professional skills. Our company provides integrated services such as production, manufacturing, installation, renovation, maintenance, and after-sales. We promise to use safety considerations to the extreme in every aspect.
